

The Great White Shark

12 Great white sharks are at the top of the ocean's food chain.
23 They are the biggest fish on our planet which eat other
33 fish and animals. They are known to live between 30
46 and 100 years old and can be found in all of the world's
57 oceans but they are mostly found in cool water close to
59 the coast.

68 They get their name from their white underbelly even
78 though they are mostly grey. The great white shark has
90 been known to grow up to six metres long and have up
100 to 300 sharp teeth in seven rows. Their amazing sense
111 of smell allows them to hunt from miles away for prey,
118 such as seals, rays and small whales.
